

# CAST™

## Sensor Data Customized to Your Needs

The Airmar® CAST™ App connects directly to Airmar's Bluetooth® enabled DST810 and DX900+ Smart™ Multisensors to enable direct calibration and configuration of the sensor. Airmar CAST connects using Bluetooth Low Energy to your multisensor and makes configuration simple with intuitive menus and guided calibration. View data from the sensor in digital or graphical format, quickly turn on or off NMEA 2000® PGNs, configure offsets and more.

The Airmar CAST App provides a consistent and reliable way to calibrate basic and heel-compensated speed-through-water with a step-by-step guided process. For advanced speed-through-water calibration, CAST allows you to manually enter data for up to four heel angles and up to ten speeds. Prior to CAST, this feature was only available on the market through expensive PC software.

All data configurations and calibrations are stored in the multisensor and delivered to the NMEA 2000® network.

### Features:

- The Airmar CAST App runs on iOS and Android™ Smart devices connects wirelessly with DST810 and DX900+ Smart Multisensors via Bluetooth Low Energy (BLE)
- Delivers a simple and consistent way of configuring NMEA 2000 data
- CAST bypasses onboard NMEA 2000 displays and allows for direct programming and calibration, guiding you through multiple runs to correct for current
- Quickly calibrate basic speed, heel-compensated speed and advanced speed
- Advanced speed calibration allows for up to four heel angles at up to ten speeds to develop a comprehensive speed curve unique to your hull
- Adjust displayed depth to compensate for the keel or add draft to display depth-below-surface
- Calibrations and configuration changes are stored in the Airmar Multisensor
- Display real time, speed-through-water, depth and water temperature data in digital or graphic format

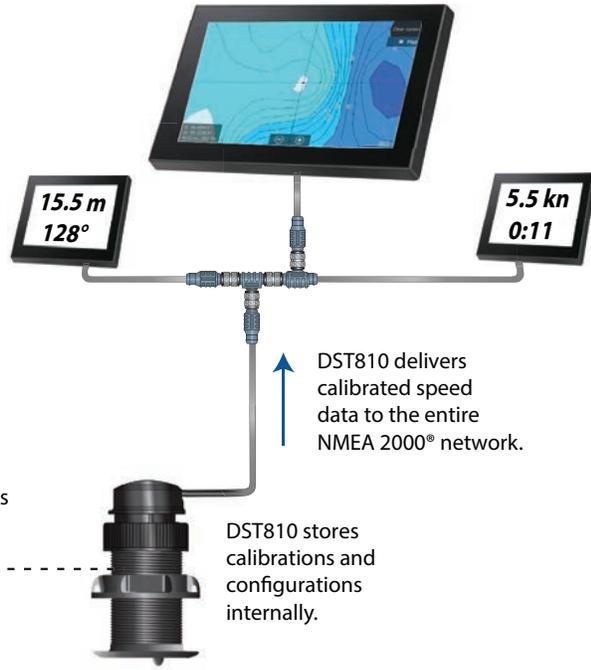

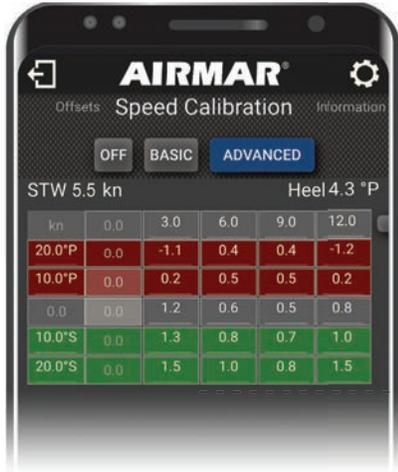

CAST™

The innovative App for allowing users to view, analyze and share sensor data to evaluate and improve performance!

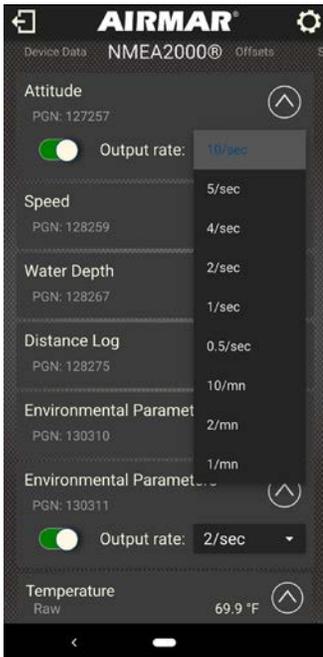

Use the Airmar CAST™ App to calibrate speed at multiple heel angles and numerous speeds for optimal performance.

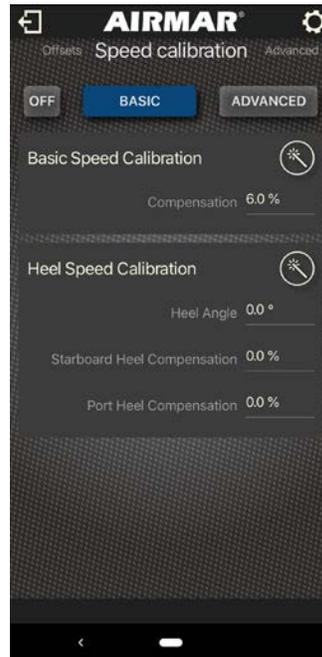

### Configure outputs

### Display data / gauges

### Calibrate basic or heel compensated speeds

### Configure offsets and calibrate attitude
